

# HERO ARM™

An affordable, lightweight multi-grip bionic arm for adults and children over seven years old

"Zak's previous prosthetics were heavier and not as user friendly, and so he wasn't overly excited to use them at the time. The Hero Arm is lighter, and he had more input into the colour and the design, so he felt more part of the process."

**Lesley Dubin (Zak's mum)**  
from Michigan, USA

# Meet the Hero Arm

The Hero Arm is a lightweight myoelectric prosthesis with a versatile multi grip bionic hand, an adjustable and breathable liner, high performance motors and batteries, and empowering aesthetics.

It is durable, reliable, clinically tested, and FDA registered.

Available through prosthetics clinics and children's hospitals, it is suitable for both adults and children as young as seven years old with acquired or congenital below elbow upper limb differences.

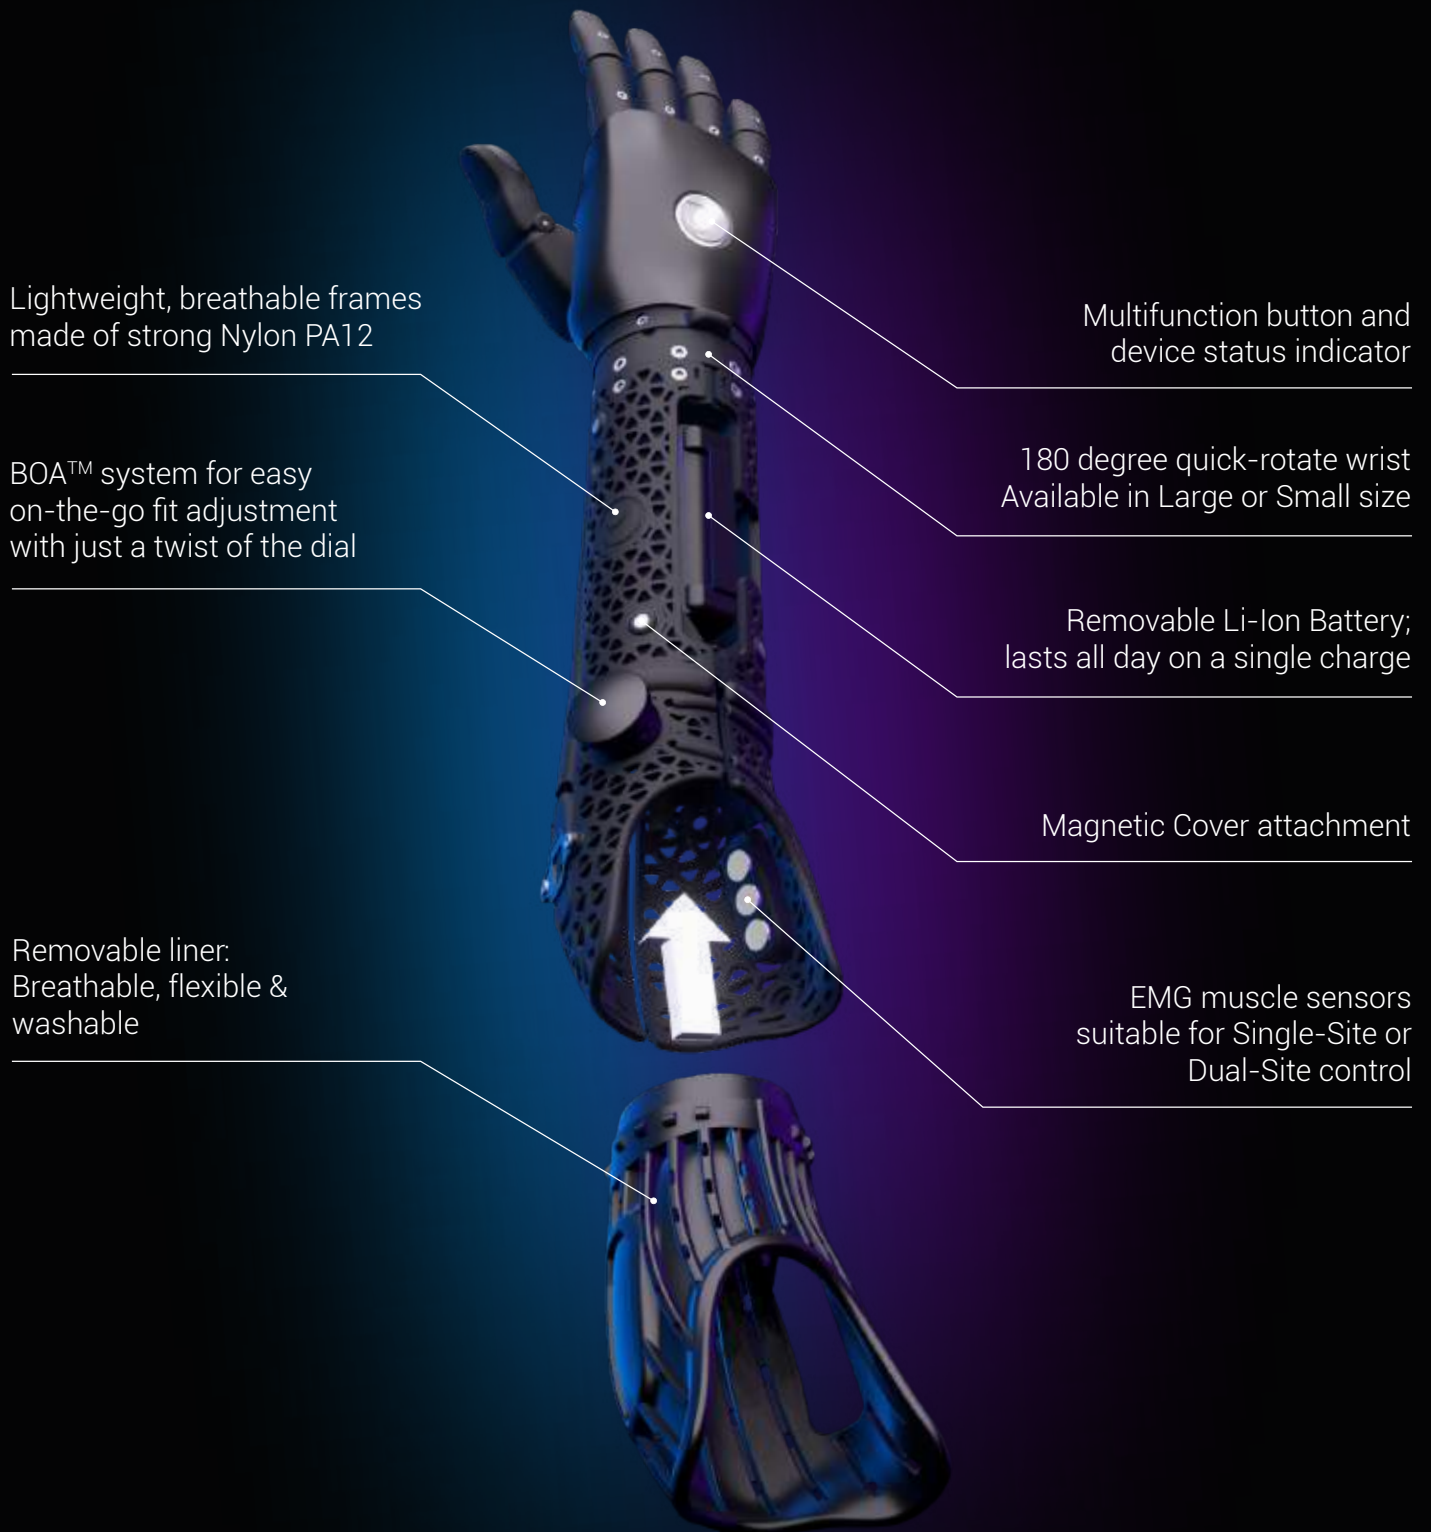

Open Bionics sculpts the liner, internal frames, and personalised covers around the user's limb, accommodating limb presentations ranging from partial wrists to very short residuals. The result is a unique, flexible liner which integrates perfectly with the user, following the curves and contours of the limb exactly. Comfort is our top priority; each liner is manufactured from a specialist flexible polymer and features a fluted and vented design which enables it to expand, contract, move and breathe with you throughout the day. All of these features add up to make the Hero Arm easy to don and doff and remain comfortable all day long.

Open Bionics has delivered Hero Arms for people of all age groups and limb presentations whether congenital or acquired. This includes bulbous residual limbs. Each potential user is carefully evaluated on a case-by-case basis to give you peace of mind that the Hero Arm is the right choice for you, but whatever your limb presentation, whether you're 7 or 77 years old there is a good chance that there is a Hero Arm for you!

# Arm Features

"This arm changes lives and changes your perspective of yourself."

Danny Florence

# Hand Features

Urethane fingertips  
with ridges for  
enhanced grip

Fist

Hook

Tripod A

Tripod B

Pinch A

Pinch B

"When I'm in school now, I wear both arms at all times - they have become part of me. Without them I couldn't have returned to teaching. They make life so much easier. The socket comfort is also a 10/10 compared to my hooks."

Kath Treganna, teacher

# Covers

Over 50 removable magnetic cover options available

"The functionality is absolutely amazing; I can make the smallest movements with it. I've tried all sorts of prosthetics over the years and the Hero Arm is by far and away the best of the lot – it's absolutely brilliant."

Daz Fuller, army veteran

"I never wanted to hide the fact that I didn't have hands. I'm so proud of my Hero Arms, I enjoy showing them off and they make me more independent. I hated all of my other prosthetics and before my Hero Arms I couldn't pull a suitcase and hold a hot chocolate at the same time. I literally love them."

“ Other children now, instead of asking "why does that girl have only one arm?", are blown away with the amazing, outstanding piece of equipment which is looked upon with envious eyes. This has increased my daughter's bubbly, zany character ten fold, and has provided her with a massive confidence boost. ”

“ Open bionics have changed my life. I get excited when I can do things I couldn't do before. I'm like a big kid showing everyone. I'm 53 years old and it's the best Christmas present I've ever had. I am so proud to wear it. No more putting my hand in my pocket to hide it. Thank you so so much. ”

## Sidekick™ App Coming 2022

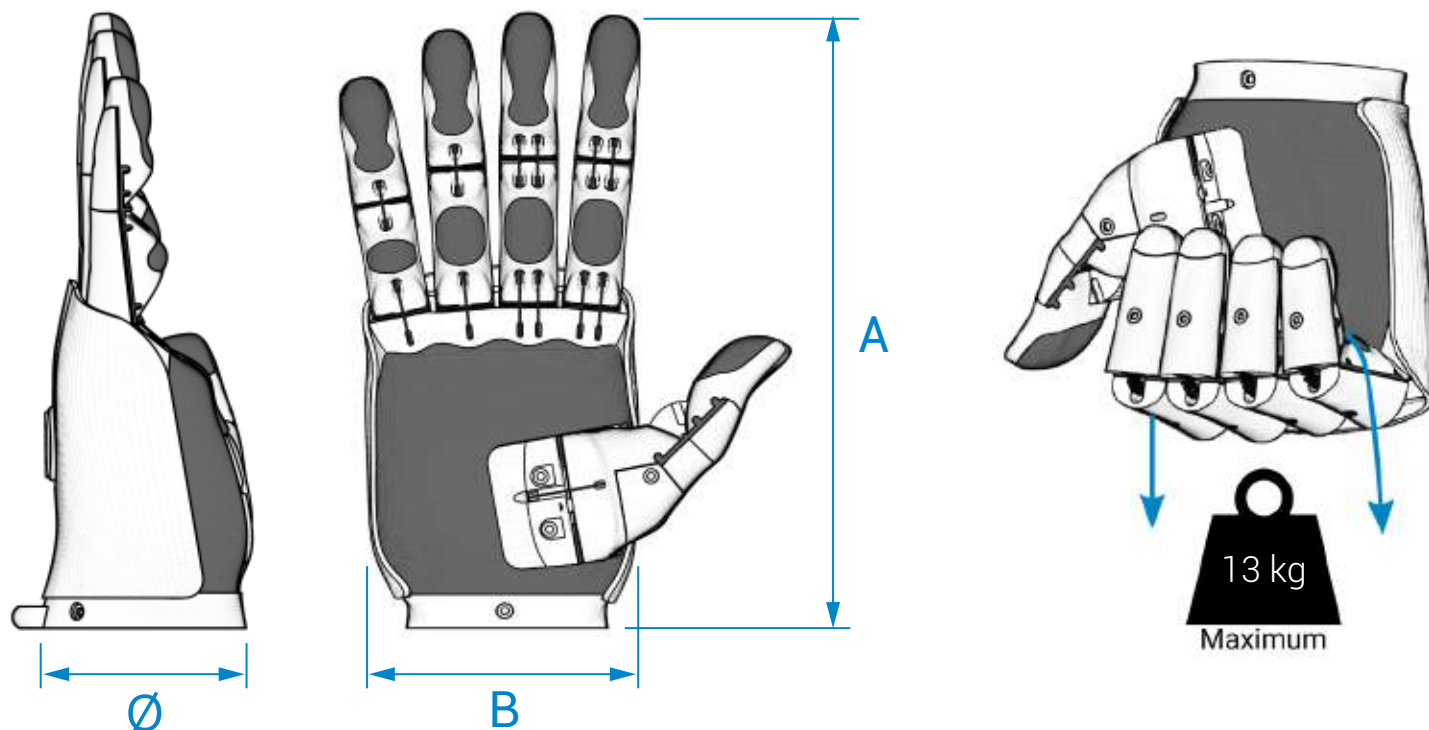

Every Hero needs a Sidekick.

Our app is here to ensure you have an easy and successful adoption of your new bionic arm. Here you will find training videos, how-to guides, tracking features that enable you to measure your learning curve, and you can configure your grip modes & other arm settings.

The Hero Arm is designed to become a part of you; with Sidekick you can increase the personalisation of your arm and get the most out of it faster.
